

PRODUCT INFORMATION

Alpine Electronics' versatile "special units"

Their mission: to provide perfect car hifi enjoyment in any ambience. The new top-of-the-line CD receivers from **Alpine** have been designed with state-of-the-art technology and to interwork with all available media. For example, the **CDA-9886R** and the **CDA-9984R** are the first control units in the new 2008 lineup which can be expanded with the addition of the fascinating new **IMPRINT** sound upgrade by way of the optional **PXA-H100** processor. The system permits fully automatic dynamic calibration of the vehicle, thus opening up new acoustic dimensions which previously could only be achieved by a hifi professional calibrating the system over a matter of hours. Needless to say, **Alpine** has also included connection facilities for USB sticks, an **iPod Fullspeed** interface and a CD unit with MP3 capability.

The **Ai-Net bus system** is very special: communication between Alpine devices with this facility is simplicity itself and it enables even complex multimedia systems to be implemented for a modest outlay. The flexibility of **CDA-9886R** and **CDA-9984R** is further enhanced by the three integrated preamplifier outputs. With 4x50W (RMS) each, these units are powerful enough even without separate output stages, while the 24-bit d/a converter ensures that the sound quality of the two head units is second to none. The units are thus a successful blend of excellent flexibility, superb acoustics and first-rate ergonomics. They are equipped not only with a practical dial-type volume control but also an interface for vehicle displays on the dashboard. This means that any distraction is absolutely minimal – the driver can concentrate totally on his or her driving. A further safety feature: thanks to this interface, the steering wheel remote control can still be used. The **CDA-9886R** model has a series of other interesting features, such as automatic volume adjustment. A tiny microphone measures the ambient noise continuously and adjusts the volume level accordingly. The result: no matter how fast the vehicle is traveling or what the road surface is like, Alpine ensures perfect acoustic enjoyment. An additional highlight is the very high resolution, high contrast BioLite display and the cordless remote control. The new Alpine head units are therefore perfectly equipped for their car hifi mission!
